Mohammed Walid
Front-End Web Developer

mvalid.cebe275@gmail.com | +90 542 229 9988

Ankara, Turkey

Experienced Front-End Web Developer with a proven track record of self-learning programming from a young age, leading to successful independent projects that enhance business operations. Known for a meticulous attention to detail and creating modern, simple, and visually stunning user interfaces. Eager to expand skills in back-end development, become a full-stack developer, and explore non-web development languages.

- TypeScript
- Git

Soft Skills

- Problem Solving
- Adaptability
- Communication and Leadership
- Fast Learning

Work Experience

August 2023 - May 2024

Afko, Ankara

As a Front-End Web Developer at Afko, I was actively involved in creating a visually appealing and user-friendly app. My responsibilities included utilizing HTML, CSS, JavaScript, React, and other technologies and libraries to develop responsive web interfaces and ensure an engaging user experience.

- Developed and maintained responsive web interfaces
- Utilized React and Ant Design to implement interactive and dynamic website features.
- Utilized Firebase for back-end functionalities like the database, hosting, authentication.
- Utilized version control systems such as Git for efficient code management.
- Continuously improved skills in web development and explored opportunities to learn PDF-creating libraries and other technologies.

Educational Experience

December 2019 - Present

Around 5 years of self-learning

Since the age of 13, I have been deeply passionate about programming and technology. With around five years of both formal education and self-directed learning, I have developed strong skills in adapting to new technologies and solving complex problems. My journey has involved mastering various programming languages and continually evolving with industry trends. This extensive experience has honed my ability to manage independent projects effectively and stay at the forefront of technological advancements.

Portfolio

Since I have been self-learning for a long time I have created a lot of personal or side projects, here are some of the main projects I did and the first one is for a company:

- Receipts and inventory management app for a company that has multiple factories and a lot of receipts and invoices.
- A Landing Page for a client that needed a modern and customizable one
- Portfolio Website I made my own portfolio website modern and with animations and still working on improving it constantly
